

Built for strength, durability, and reliability, Tidal Mooring Shackles are specifically designed to meet the rigorous demands of the marine and aquaculture industries. With a wide-mouth design, these shackles allow for the passage of heavy-duty hawser thimbles and large synthetic rope thimbles, eliminating the need for oversized, heavy shackles that can be difficult to handle.

Tidal Marine Mooring Shackles are manufactured with alloy steel and quenched tempered to provide our customers with safety and reliability they count on. Every shackle is manufactured and tested to meet ISO9001 standard Ensuring the product to be void of hydrogen embrittlement.

Tidal Part #	Description	MBL (t)	Dimensions (mm)
